CREW

SUN-HOOD | SUNSHADE | FACADE SCREEN

PRODUCT DESCRIPTION

The ADA Crew Series is a panelised aluminium sun-louvre system for horizontal hoods and vertical screens. Blades are mounted on a central tie-rod with precision spacers at a consistent 60 mm pitch, locking the array at an effective sun-shading angle $\sim 45^\circ$. The result is a tidy, repeatable look with fast site installation and dependable durability.

MATERIAL

STANDARD - Australian extruded aluminium 6063-T5
OPTIONAL - High quality Australian steel, vermin/bird mesh

FINISH

STANDARD - Mill Finish or Natural anodised
OPTIONAL - Colour anodised or powder coated

INSTALLATION

Factory-assembled Crew Series panels fix to a straight, plumb sub-frame using stainless fasteners, with shims to align faces and maintain a consistent blade pitch. For horizontal hoods, set to level with required fall; for vertical screens, keep gaps uniform and faces flush to tolerance. Crew Series provides shade/screening (not weatherproof)—use flashings or back-pans where rain exclusion is required.

DESIGN & DIMENSIONS

OPTIONAL - Blade Vertical or Horizontal
